

PRESS RELEASE

CLAMAR Floats – Model 2180 Amphibious Floats on Carbon Cub EX

October 30, 2013: FOR IMMEDIATE RELEASE

CLAMAR has installed the new electric float system (M-2180) on the Carbon Cub EX with great success.

The same float is being installed on other aircraft in this weight category – AirCam, Murphy Rebel as well as Glastar.

The exchange weight for the installation on the Carbon Cub is 256 lbs for the electric float system and that will give the average CC-EX a useful load of over 600 lbs.

Clair Sceli commented, "The performance is unbelievable. Power up and off the water in one motion! Definitely no step period." Sceli says, "The M-2180 has a great shock absorbing system in both the main and nose wheel for smooth grass field landings."

Delivery dates are available for spring 2014. Call for dates and pricing.

Check the web site www.clamarfloats.com for even more information on the M2180 float system.
